Environmental Assessment Worksheets

Project Title: Mission Creek Restoration Project

Comment Deadline: January 23, 2019

Project Description: The Mission Creek Restoration project will stabilize a 2,800 foot long reach that was negatively impacted by the flood of 2012. The project includes the removal of a debris catcher that was originally installed to protect the Highway 23 Bridge from being blocked with logs and other materials. During the June 2012 Flood, the stream jumped around the debris catcher. Channel form will be restored, pool and riffle habitat will be created, the creek will be re-connected to the floodplain and native vegetation will be re-established in the riparian corridor. Removal of the debris catcher will result in a single thread, free-flowing channel where there are currently several. Restoring Mission Creek will have lasting beneficial effects on the health of this stream and on the greater watershed. Public comments will be accepted through January 23rd.
